

SIUS

The future of electronic targets...

LASERSCORE®

**A worldwide first laser
electronic scoring target for
airguns and small bore rifle**

- World's most accurate target
- Threefold infrared (harmless) laser measurement
- Contact free shot measurement in the target plane
- No parallax errors
- Sensationally consistent accuracy
- Low maintenance
- Weatherproof for outdoor shooting
- Worldwide patent application
- Integrated target illumination
- Witness screen by paper strip (optional)
- Superior cost/performance ratio

After years of research and development, SIUS has achieved another break through in electronic target systems. The production of the world's first laser electronic scoring target has begun.

LASERSCORE®

How it works: When the projectile passes through the target plane, it is detected by three independent infrared lasers. This laser technology allows for projectile detection with the astounding accuracy of a few hundredth of a millimeter. The exceptional resolution even enables the determination of the projectile's form!

For this reason, LASERSCORE® is possibly the most accurate target in the world.

Since the measurement is taken at the horizontal target plane there is no risk of parallax errors when shooting at an angle on the target.

As optional items, an integrated target illumination system is offered, as well as a shot record (paper strip) - mandatory for all international ISSF championships - which can be mounted to the back of the target. The completely sealed electronics enables the use of the target, not only for air rifle and pistol, but also for small bore rifle outdoor. LASERSCORE is compatible with all other SIUS-LON-systems. The current CU941 includes the complete software for all disciplines, distances and targets from 10 up to 300 meters. Existing 10-meter or 50-meter SIUS-LON-systems can be easily converted by only changing the target.

Technical Data

Unit	Dimensions	Weight
Target LASERSCORE®	44,5x44,5x7 cm	5,5kg
