### Printing and display program «10 Lane Command Desk»

«10 Lane Command Desk» enables the connection of up to 10 control units directly to a PC with printer (additional to the Central-PC). When used, individual thermal printers can be replaced by a single laser printer. The printout of the shooting program is made automatically after the last shot or manually by the shooter. «10 Lane Command Desk» enables the display of the connected shooting lanes for the spectators as well. The type of display can be chosen individually according to the own personal needs. Even the control of each single lane is possible (e.g. malfunctions of weapons, interruption of programmes etc.).

### Distribution box for «10 Lane Command Desk»

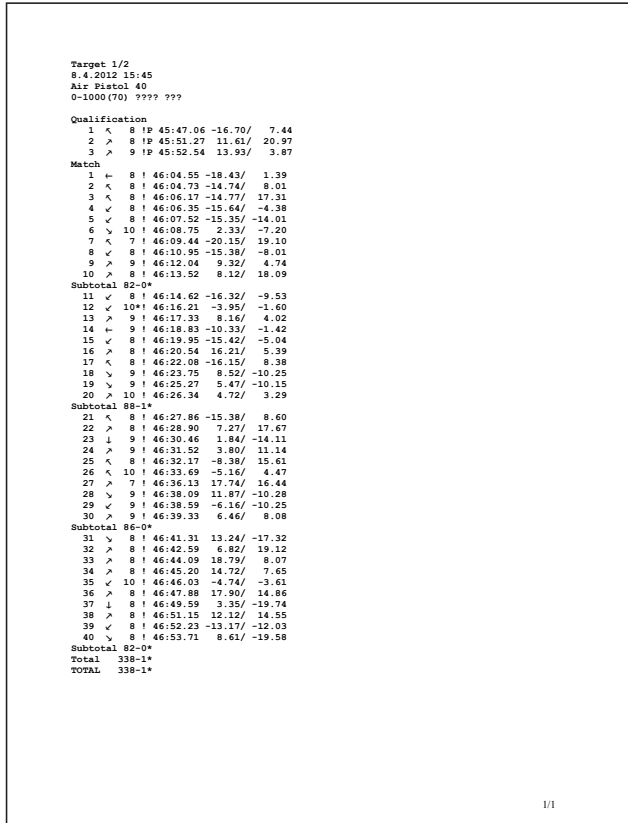

Also available as optional equipment for «10 Lane Command Desk» is a functional, lockable device box with integrated multiple socket outlet. All required components as laptop, power supply and USB-LON-Dongle can be stored easily inside.
